

Website name: Creeper Charity

Description: A welfare website I make to care for creepers. Creeper is an explosive creature in the video game Minecraft. When players hunt and kill creepers for gunpowder, there would be millions of creepers dead. I am going to make a website to care for them, because they are so cute!

Web Page:

1. In my website, I will set 5 different pages for the user to browse.

2. In the home page, there would be some attractive images and sentences, and navigation to all other parts.

3. In the information page, there would be detailed descriptions about creepers.

In the collection page, it would display some creepers which receive help from this website with their pictures.

4. In the artworks page, there would be some artworks about creepers, including youtube videos and pictures.

5. There would be a portal page for users if they want to upload some funny artworks about creepers. The images or videos they upload would be stored in the website's database.

Only the administrator will be able to edit the website pages.
